KEY TO VESSEL ANNOTATIONS

1. Possible transporter dock (could not be measured).
2. Possible transporter dock (visible LOA approx 440').
3. Unidentified vessel (visible LOA approx 225').
4. Two probable transporter docks (visible LOA of each approx 440').

KEY TO FACILITY ANNOTATIONS

- A. Probable shop type building under construction (length of completed portion approximately 500 feet, width of completed portion approximately 110 feet).
The roof appears to be approximately three-quarters complete.
- B. Large building in a very early stage of construction (overall dimensions approx 1560' x 405').
Excavations, ground scars, and the partially erected upright supports indicate that this building will have three large bays. Each bay will probably be approximately 1235 feet by 135 feet. Ground scars indicate that approximately 325 feet of the westernmost end of the building will be structurally different in that the lengthwise axis of the much narrower bays is perpendicular to the three 1235 foot bays.
If this building is to be a construction hall, the transverser would have to be extended approximately 700 feet southward and the winch house would have to be relocated in order to serve all three bays of the construction hall.
- C. A third bay is being added to the new two-bay construction hall. The roof of the third bay is approximately one-third complete and structurally appears identical to the other two bays.
